

### **AMENDMENTS TO THE SPECIFICATION**

Please replace the paragraph on page 1 starting on Line 8 with the following amended paragraph.

Regular TV racks for holding a TV, CD player, stereo system, etc. may be made of metal or wood. A wooden TV rack wears quickly with use, and tends to deform due to high humidity. However, a wooden TV rack gives a warm comfortable ~~friendly touch~~ impression. Wooden TV racks are found to be acceptable ~~more popularly accepted~~ by consumers. A metal TV rack is durable in use and does not deform due to high humidity or hot temperature. However, a metal TV rack is cold to the touch and is therefore not attractive.

Please replace the paragraph on page 1 starting on Line 17 with the following amended paragraph.

It is the main object of the present invention to provide a TV rack, which uses metal support members to support wooden plate members. It is another object of the present invention to provide a TV rack, which has the advantages of the soft and friendly touch of wooden materials and the advantages of the high durability of metal materials. It is still another object of the present invention to provide a TV rack, which is easy to assemble.

Please replace the paragraph on page 7 starting on Line 13 with the following amended paragraph.

As indicated above, the TV rack uses metal supporting frames bars to support a wooden front frame and wooden top, bottom and back panels. The invention has the advantage of the soft and friendly touch of wooden material and the advantages of the weather-proof performance and high durability of metal material. The metal supporting frame bars support the wooden front frame and the wooden top, bottom and back panels firmly in position. Further, the assembly procedure of the present invention is simple.
